Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant CDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Email: genome-resegsc.riken.go.jp,

//note=_lob="Note: pSPORT! Invitrogen; Site_l: Sall; Site_2: Not!; Mouse cDNA project by the Laboratory of Genetics, Not!; Mouse cDNA project by the Laboratory of Genetics, Not!; Mouse cDNA project by the Laboratory of Genetics, Not!; Mouse cDNA project by the Laboratory of Genetics, Not!; Mouse cDNA project by the Laboratory of Genetics, Not!; Mouse cDNA project by the Laboratory of Genetics, Not!; Mouse cDNA project by the Laboratory of Genetics, Not!; Mouse cDNA; Downerse, 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were obtained from Drs. Dennis Taub. Dan Longo (National Cancer Institute on Aging, USA), Jonathan Relier (National Cancer Institute, USA). Downle-stranded cDNAs were synthesized with an Oligo(dT) primer [Invitrogen: The CDNAs were ligated to Lone-linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the CDNAs were digested with Apiner Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The CDNAs were digested with Sal1 and Not! enzymes and cloned into Sal1/Not! site of psPORT! plasmid vector. The DHIOB E. Coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.2 kb. The library was constructed by Yulan Plao (NIA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           85 GTTCAGCTGCAGCAGCTGGAGCTGAGCTGAGCCTGGGGCCTCAGTGAAGCTTTCC 144

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents the heavy chain variable region of the murine antibody 11D10. This anti-idiotype antibody is used to delay the development of, or treat, a human milk fat globule (HMFG) associated tumour in an individual having low tumour burden. The antibody 11D10 is used to prevent the recurrence of HMFG-associated tumours e.g. ovarian, non-small cell lung and pancreatic carcinoma, especially for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Delaying development of, or treating, HMFG-associated tumours -using anti-idiotype antibody 11D10 raised against antibodies to human milk fat globule protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 MECSWVFLFLLSITTGVHSQAYLQQSGAELVRSGASVKMSCKASGYTLLSINMHWVKQTP 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MECSWVFLFLLSITTGVHSQAYLQQSGAELVRSGASVKMSCKASGYTLTSYNMHWVKQTP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This polypeptide sequence comprises the heavy chain variable region (VH) of monoclonal anti-idiotype antibody 11D10 produced by hybridoma cell line ATC 12020. 11D10 was obtained by immunising naive mice with MC-10 anti-HMFG antibody to obtain an anti-idiotype response. It elicits an immune response against a specific epitope of a high mol.wt. mucin of human milk fat globule (HMFG). It induces an immunological response to HMFG in mice, rabbits, monkeys and patients with advanced HMFG-associated tumours. Pharmaceutical compositions and vaccines comprising 11D10, 11D10 polypeptides and/or 11D10 polymucleotides (see also AATBS119-50) are claimed. Also claimed are diagnostic kits and methods of using 11D10, 11D10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         treating HMFG-associated tumours. 11D10 is also used in a claimed method of palliating HMFG-associated disease and in claimed kits to detect or quantify anti-HMFG antibody.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises a method for delaying the development of, or treating a tumour that is associated with human milk fat globules (HMFG) or carcinoembryonic antigen (CEA). The method of the invention involves administering an anti-idiotypic antibody for HMFG (e.g. 11D10), and an anti-idiotypic antibody for CEA (e.g. 3H1). The method is useful for delaying the development, of or treating HMFG/CEA-associated tumours. The present amino acid sequence represents the heavy chain variable region of the mouse 11D10 anti-idiotype antibody.

MAb 1A7 has defined light and heavy chain variable region. Sequences. The MAb 1A7 and polypeptides can be used for eliciting an anti-GD2 immune response. The polypeptides can also be used for detecting or purifying anti-GD2 antibody. The products can be used for treating GD2 - associated diseases, e.g. melanoma, neuroblastoma, glioma, soft tissue carcinoma, and small cell carcinoma. They can be used for palliating the disease or for reducing the risk of recurrence. The present sequence represents the heavy chain variable region of MAb 1A7.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This polypeptide is the variable heavy chain region of monoclonal anti-idiotype antibody 1A7. The polypeptide has three CDRs (complementarity determining regions) and four frame work regions. When administered to an individual the 1A7 antibody induces an immune response against ganglioside GD2. The light chain variable region of the 1A7 antibody (AAY28468) is also capable of eliciting an anti GD2 response in mammals. Both the heavy and light chain variable regions of the 1A7 antibody produce anti-GD2 T cell and antibody responses. The peptides antibodies may be useful for the modulation of gangliaside GD2, and particularly for the treatment of GD2-associated tumours e.g. melanoma, neuroblastoma, glioma, soft tissue sarcoma, and small cell carcinoma
                                                                                                 Heavy chain variable region; antibody 1A7; T cell response; carcinoma; ganglioside GD2; CDR; complementarity determining region; melanoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Anti-GD2 immunological peptides useful for the treatment of tumours especially melanomas and small cell carcinomas

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention provides a method of treating of psoriasis by administering an antigen which has similar immunogenic properties to an antigen expressed on cells of psoriatic tissue so that an immunological response is elicited in the individual. The antigen stimulates the generation of anti-idiotype antibodies that neutralize the aberrant immune response causing the psoriasis. The method is used to treat psoriasis, especially chronic plaque, gluttate, pustular, plaque-type psoriasis or psoriatic arthritis. The compositions allow the individual's own immune system to act against psoriatic tissue. The present sequence represents the heavy chain variable region of monoclonal antibody 1A7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Psoriasis; immunological response; anti-idiotype antibody; gluttate; chronic plaque; pustular; plaque-type psoriasis; psoriatic arthritis; monoclonal antibody; 1A7.

The invention relates to humanised monoclonal antibodies (MAb) against
Shiga toxins. The humanised MAb that binds to Shiga toxin comprises a
constant and a variable region, where: (a) the constant region contains
at least part of a human immunoglobulin (Ig) constant region, and (b) the
variable region contains at least part of a non-human Ig variable region.
String toxin type 2 is useful for treating a patient with an infection
caused by enterohemorrhagic Escherichia coli (EHEC) or other Shiga toxin
producing bacteria. The humanised MAb can also be used to reduce illness
caused by EHEC or other Shiga toxin producing bacteria. EHEC are
associated with food-borne outbreaks of bloody diarrhoea (hemorrhagic
colitis) and the hemolytic uremic syndrome. In particular, the humanised
MAbs ameliorate edema, thrombocytopenia and uremia associated with EHEC-
cantellar diasease. The present sequence represents an anti-STX1 heavy
                                                                                                                         Humanised; monoclonal antibody; MAb; Shiga toxin; immunoglobulin;
ig constant region; enterchemorrhagic Escherichia coli; EHEC; uremia;
edema; bloody diarrhoea; hemorrhagic colitis; hemolytic uremic syndrome;
thrombocytopenia; EHEC-mediated disease; anti-STXI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Humanized monoclonal antibodies against Shiga toxins, useful for
protection against enterohemorrhagic Escherichia coli or other Shiga

The present sequence is that of the murine anti-idiotype monoclonal antibody (MAb) 1A7 variable heavy chain. MAb 1A7 was raised against the anti-ganglioside 2 (GD2) MAb 14G2a, which binds an unique epitope of GD2. As the glycosphingolipid GD2 is expressed at high density by human neuroectodermal tumours, e.g. malignant melanoma. Concernoted and small cell carcinoma of the lung, MAb 1A7, or its CDM can be used in a vaccine to treat or palliate such diseases. They can also be used to reduce the anti-GD2 Ab bound to a tumour cell.

MAb 1A7 overcomes immune tolerance and induces an immune response against GD2, which comprises anti-GD2 Ab (humoral response) and CD2-specific cells (cellular response). It can be used to purify anti-GD2 in a sample or measure the level of cellular anti-1A7 or anti-GD2 (AD1') or 14G2a (AD1') or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antigen binding region; antibody; 138H11; VH region; VL region; human; gamma-glutamyl transferase; gamma-glutamyl transpeptidase; EC 2.3.2.2; kidney cell; carcinoma; renal cell; cytostatic; tumour; antitrheumatic; antiarthritic; liver; stomach; ovary; breast; glioma; melanoma; autoimmune disease; rheumaticid arthritis; metabolic disorder; leukotriene biosynthesis; mercaptoacid; glutathione; metastasis; differentiation; adenocarcinoma.

The present sequence represents a fusion of an anti-CD20 single chain antibody (BBE9) streptavidin. The fusion protein is expressed using vectors of the invention. The specification describes vector constructs for expressing streptavidin fusion proteins. The vector comprises a nucleic acid encoding streptavidin fusion proteins. The vector comprises a linked to a promoter, and a cloning site for insertion of a second nucleic acid sequence encoding a polypeptide to be fused with streptavidin, interposed between the promoter and the first nucleic acid sequence. Alternatively, the vector construct comprises a nucleic acid, operatively linked to a promoter, encoding a polypeptide to be fused with streptavidin, and a cloning site for insertion of a second nucleic acid encoding at least 129 minno acids of streptavidin or its functional variant. The fusion proteins are useful for targeting tumour cells, particularly tumour cells associated with cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         e.g. adenocarcinomas or hematological malignancies. The vector construct is useful for expressing of streptavidin fusion proteins. In particular, these are useful as tools for medical diagnostics and therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              purposes, e.g. for detecting the presence or absence of, or treating, a target site within a mammalian host.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New vector constructs for expressing genomic streptavidin fusion proteins which are useful for targeting tumour cells associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CD20-specific receptor; CD-20 specific redirected T cell; leukemia; CD20+ malignancy; non-Hodgkin's lymphoma; myeoablative chemotherapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a fusion of an anti-CD20 single chain antibody (BPE9) streptavidin. The fusion protein is expressed using vectors of the invention. The specification describes vector constructs for expressing streptavidin fusion proteins. The vector constructs nucleic acid encoding streptavidin nor its functional variant operatively linked to a promoter, and a cloning site for insertion of a second nucleic acid sequence encoding a polypeptide to be fused with streptavidin, interposed between the promoter and the first nucleic acid, operatively linked to a promoter, encoding a polypeptide to be fused with streptavidin, and a cloning site for insertion of a second concline acid encoding at least 129 amino acids of streptavidin or its functional variant. The fusion proteins are useful for targeting tumour cells, particularly tumour cells associated with cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      e.g. adenocarcinomas or hematological malignancies. The vector construct is useful for expressing of streptavidin fusion proteins. In particular, these are useful as tools for medical diagnostics and therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           detecting the presence or absence of, or treating, a

murine-human anti-carcinoembryonic antigen (CEA) chimeric antibody. Which can be used in in vitro immunoassays for the detection of CEA, and monitoring of tumour-associated antigen during therapy. It can also be used in vivo diagnostically, or in therapy for the treatment of tumours associated with colorectal and breast carcinomas, as well those of the gastrointestinal tract, lung, ovary and pancreas. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Anti-carcinoembryonic antigen chimeric antibodies - for diagnosis and therapy of carcinoma, e.g. breast or colorectal carcinoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a synthetic CD20-specific chimeric receptor. The specification describes CD-20 specific redirected T cells which express and bear on the cell surface membrane a CD20-chimeric receptor comprising an intracellular signalling domain, a transmembrane a CD20-specific receptor. The genetically engineered CD20-specific receptor. The genetically engineered CD20-specific redirected T cells are useful for treating a CD20+ malignancy, such human patient having previously undergone mycoablative chemotherapy and stem cell rescue. The genetically engineered CD20-specific redirected T cells are useful for always modergone mycoablative chemotherapy and stem cell rescue. The genetically engineered CD20-specific redirected T cells are also useful for abrogating an untoward B cell function, such

                                                                                                                                                                                                                                           murine-human anti-carcinoembryonic antigen (CEA) chimeric antibody. Which can be used in in vitro immunoassays for the detection of CEA, and monitoring of tumour-associated antigen during therapy. It can also be used in vivo diagnostically, or in therapy for the treatment of tumours associated with colorectal and breast carcinomas, as well those of the gastrointestinal tract, lung, ovary and pancreas. Sequence 4, Application US/09990205
Patent No. US20020150572A1
GENERAL INFORMATION:
APPLICANT: FOON, Kenneth A.
APPLICANT: FOON, Kenneth A.
TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR THE TREATMENT OF PSORIASIS
FILE REFERENCE: 304142000501
CURRENT APPLICATION UNMBER: US/09/990,205
CURRENT FILING DATE: 2001-11-20
PRIOR APPLICATION NUMBER: US. 09/192,838
PRIOR FILING DATE: 1998-11-16
PRIOR FILING DATE: 1998-11-17
NUMBER: OF SEQ. DI NOS: 5
COMMINDED: US. 05/10-11-17
                                                                                                                                                                                                                                                                                                                                                                                 APPLICANT: Malaya CHATTERJEE

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Ig heavy chain precursor V region (4C11) - mouse (fragment) C;Species: Mus musculus (house mouse) C;Date: 30-Jun-1992 #sequence_revision 30-Jun-1992 #text_change 21-Jan-2000 C;Accession: PL0011

R;Cheng, H.L.; Sood, A.K.; Ward, R.E.; Kieber-Emmons, T.; Kohler, H. Mol. Immunol. 25, 33-40, 1988 A;Title: Structural basis of stimulatory anti-idiotypic antibodies. A;Reference number: PL0011; MUID:88142863; PMID:3125424

A; Accession:

A; Molecule type: mRNA A; Residues: 1-151 <CRES A; Experimental source: cell line 4C11 C; Comment: This protein is an anti-idiotypic antibody that induces an anti-phosphoryl C; Superfantly: Immunoglobulin V region; immunoglobulin homology C; Reywords: heterotetramer; immunoglobulin E; 1-19/Domain: signal sequence #status predicted <SIG>

F;20-136/Product: Ig heavy chain V region 4C11 #status predicted <MAT>
F;34-117/Domain: immunoglobulin homology <IMM>
F;34-117/Comain: complementarity-determining 1
F;69-85/Region: complementarity-determining 2
F;118-125/Region: complementarity-determining 3
